

Smarter Sales and Use Tax Automation

TaxView™

Fix your sales and use tax errors – once and for all.

TaxView™ Benefits

Immediate value and minimized risk.

- More accurate monthly tax filings
- Ultimate visibility into all data and errors
- Control around your audit and accrual process
- Fast monthly tax closings
- Single source of truth for purchases and tax
- Quantifiable monthly savings
- Documented proof of compliance
- And more...

For many companies, the calculation of sales and use tax is anything but precise. Complex and changing rules, and a lack of critical information at the time of transaction, make it impossible to accurately calculate tax.

The result is additional risk your business can't afford to take. Under payments of sales and use tax can lead to audit risk and hefty penalties. Over payments, on the other hand, can easily cost companies tens (or hundreds) of thousands of dollars each month. Some companies hire consultants to conduct reverse audits, but they are expensive and it's impossible to manually analyze every transaction. More importantly, you aren't fixing the problem. We believe you there's a better way to get your sales and use taxes right – it's called **TaxView™**.

Seven-figure tax savings is our norm, and that's just the beginning.

TaxView is the industry's only indirect Tax Audit and Accrual Solution. Our powerful cloud software delivers the most accurate calculation of corporate sales and use taxes possible, with minimal disruption to your business.

TaxView provides the level of data visibility and granularity needed to correctly determine how a transaction should be taxed. It also helps fix tax errors to minimize over payments and under payments, which translates into significant savings and prevents costly interest, penalties, and audit fees. Within the first month, TaxView will reduce your tax risk and put money back to your bottom line.

Two different options to fit your business requirements.

No matter how complex your tax requirements, TaxView has a solution.

Turnkey, high-touch solution ideal for companies with complex indirect tax requirements. We provide a dedicated account manager to take care of tax rule configurations and help with the monthly tax closing process.

Packaged solution perfect for small or mid-sized companies with less complicated tax requirements. The system expertly guides you through rule configurations and the monthly close process.

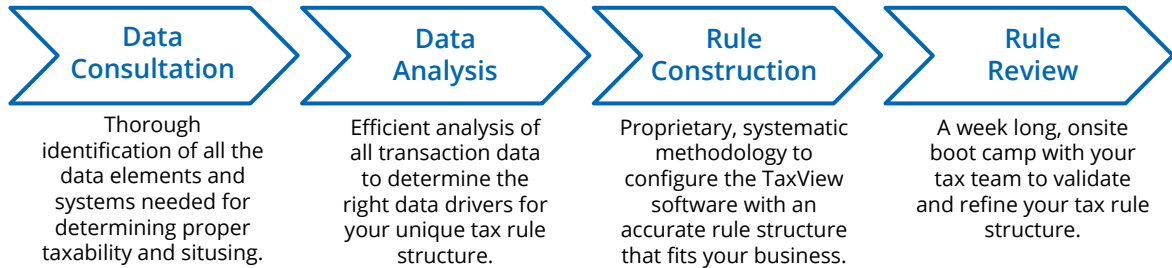

We've never met a tax rule we can't match. And here's why.

Proven Rules Methodology

TaxView is built on a Proven Rules Methodology backed by years of research, continuous tax rule updates, and real-world substantiation. Applied to your unique business and taxation requirements, it makes the most accurate tax decision possible for each transaction.

Our Proven Rules Methodology provides clear steps to accurate rule construction*:

*With TaxView Express these steps of our Proven Rules Methodology are automated or provided through best practices tools.

Smart Technology

Your business is constantly changing, and so are tax requirements. TaxView gives you a solution that keeps pace with changes and gets smarter over time. TaxView is easy to update and rules are virtually unlimited providing unprecedented flexibility, granularity, and visibility into rules and transaction information.

Key capabilities include:

- **Maximum Rules Flexibility** – TaxView provides maximum flexibility for any rule structure. Due to the combination of data elements and operators that can be used, any rule can be written without limitations.
- **Zero Integration** – Because TaxView doesn't require any systems integration, implementation is easy and maintenance costs are low. Transaction data is simply imported each month.
- **Data Granularity** – TaxView is configured to accept up to 160 data elements per transaction, 51 of which can be used interchangeably for precise rule construction.
- **Ultimate Visibility** – TaxView operates as a single, consolidated source for all your transactions. This provides a system of record for sales and use tax, and allows you to review all of your transactions in a short period of time.
- **Tax Rate Content** – Taxability content and rates are kept up-to-date at no additional charge. You also have the flexibility to establish custom tax codes if the published tax content does not address a tax scenario your business needs.
- **Refund Center** – TaxView is the only tax software that provides a mechanism to build and track refunds claims associated with the errors found. It produces supporting information to file refunds with vendors and/or taxing jurisdictions.
- **TV Navigator** – Our proprietary dashboard provides a concise, batch-level view of every key piece of information you need to review for the period. This includes your largest (5) over and under payments by rule, state, and vendor. It also displays the gross and net tax standings for the batch and where your current rule approval process stands.

No Risk Model

With TaxView you get fast time-to-savings, no disruption and no risk. Our no-risk model makes it fast and simple to implement the software so you can immediately see its value. We can onboard any organization in as little as 6 to 8 weeks with minimal disruption to your tax and IT departments. TaxView also minimizes your risk by quantifying the value it delivers every month and offering the most lenient cancellation policy in the industry. If you aren't 100% satisfied, you can cancel anytime.

Ready to get your indirect tax right?

Let us bring accuracy and simplicity to your sales and use tax filings.
